(Communication In everyday life)

* Disadvantages of Audio-visual aids :-

① Technical Problems -

Equipment can fail, such as a projector bulb burning out or audio not working, which disrupts the flow of a presentation.

② Cost -

There can be significant costs associated with purchasing equipment, software and high-quality content.

③ Time-consuming -

Preparing and creating audiovisual aids can take a considerable amount of time, especially when producing original content.

④ Space considerations -

The size of the room and the visibility or audibility for the entire audience must be taken into account.

⑤ Inconvenience -

Some older equipment can be bulky and difficult to transport.
